

TEAM HOGWARDS

Report:

The team took a good, close look at all the information we have in our dataset and discussed about the different variables/attributes from which we can learn from the data.

Alwin sir helped us with some questions about the problem statement we're trying to solve, and we also got some information from some volunteers about the variables.

The team brainstormed and talked about more analytical questions that can give more insights and can help answer different question in and around the problem statement given.

Discussed about the target variable which we need to predict.

Went through numerous visualizations and charts that can be added in our presentation which can help the viewers understand the outcome better.

Discussed about different models which can be implemented and better suited for the dataset.

Work Divided:

Aditya and Narpat: Exploratory data analysis and visualizations

Krish: Model development and evaluation

Kedhar: UI/UX design
